SIEMENS

Controls modernization to reduce minimum load

Minimum Load Reduction

- Use of robust state space controller for unit control
- Adaptation, optimization and setting of lower-level controls for new minimum load level
- Adaptation or addition of control sequences, burner and mill scheduler
- Provision of additional instrumentation where necessary
- Modifications, additions or replacement of original DCS as necessary
- Faster response to increased load demands as unit does not need to be shut down
- Avoidance of unnecessary start-ups and shutdown

 - Combined Cycle: Mainz-Wiesbaden
 - Lignite fired: Neurath Units D and E
- 4 Conclusions

Results at CCPP Mainz-Wiesbaden - Power station 3 Hot start-up time reduced to 27 minutes

- Combined Cycle
- SCC5-4000F
- Multi shaft
- ≈ 440 MW
- Built 2000
- Hot Start on the Fly (HoF) is the standard start up process after overnight stop
- Highly predictable start up time of 27 minutes (+/- 2 minutes)

SIEMENS Ingenuity for life

Andreas Feldmüller

Results at RWE Neurath Unit D Load gradient tripled, Minimum load reduced by 40%

- 630 MW, tangential, lignitefired, built 1975
- Boiler design for base load
- Fuel changed massively compared to design

Reference: PowerGen Europe 2013

A Vision Becomes Reality, One of the most flexible lignite fueled units of the World -Achieved by a DCS Retrofit Björn Pütz & Thomas Schröck, RWE AG, Annette Barenbrügge & Bernhard Meerbeck, Siemens AG

- · Installation of a new robust state-space unit control
- · Fully automatic mill shut-on and shut-off
- Optimisation of all subordinated controllers, e.g. air, feedwater, fuel

- ³ Show cases
- 4 Conclusions

Conclusions

- Operational flexibility of power plants has increased in the last years
- New plants and plant modernizations lead to increasing operational flexibility of the installed fleet
- Large improvements could be achieved by plant modernizations

Disclaimer

This document contains forward-looking statements and information – that is, statements related to future, not past, events. These statements may be identified either orally or in writing by words as "expects", "anticipates", "intends", "plans", "believes", "seeks", "estimates", "will" or words of similar meaning. Such statements are based on our current expectations and certain assumptions, and are, therefore, subject to certain risks and uncertainties. A variety of factors, many of which are beyond Siemens' control, affect its operations, performance, business strategy and results and could cause the actual results, performance or achievements of Siemens worldwide to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements. For us, particular uncertainties arise, among others, from changes in general economic and business conditions, changes in currency exchange rates and interest rates, introduction of competing products or technologies by other companies, lack of acceptance of new products or services by customers targeted by Siemens worldwide, changes in business strategy and various other factors. More detailed information about certain of these factors is contained in Siemens' filings with the SEC, which are available on the Siemens website, www.siemens.com and on the SEC's website, www.sec.gov. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in the relevant forward-looking statement as anticipated, believed, estimated, expected, intended, planned or projected. Siemens does not intend or assume any obligation to update or revise these forward-looking statements in light of developments which differ from those anticipated.
