

GLOBAL
CLEAN ENERGY
ACTION FORUM
CEM13/MI•7 USA 2022

The Global Clean Energy Action Forum (GCEAF) is in full swing in Pittsburgh, with queues to access the Forum literally snaking around the city's many venues and the launch of dozens of exciting, new initiatives touching all aspects of the transition to clean energy. Never before has a Clean Energy Ministerial (CEM) been so big, bold and buzzing! Friday is our final day, but don't expect the pace of action to slow down. Here's a bit of what to look forward to (spoiler alert: the next generation of clean energy champions will be out in force and we say "bem-vindo" to the host of CEM15).

Livestream: Mainstage Event

Friday's highlight will be the hour-long Clean Energy Ministerial mainstage event in the Spirit of Pittsburgh hall. Moderated by good friend of the CEM, John Elkind of Columbia University, attendees will see a diverse panel that shows CEM's true geographic and economic breadth: ministers from New Zealand, the Netherlands and the United States plus experts from partner

organisations like the International Solar Alliance. It's not one to miss!

[Details here](#)

Something for Everyone

Our home for the Forum, the David Lawrence Convention Center, will hold approximately 60 side events on Friday, addressing everything from industrial decarbonization to empowering people and communities, the future of multilateralism, and country spotlights from our future host, India. There is something for everyone today at GCEAF! [Side event schedule here](#)

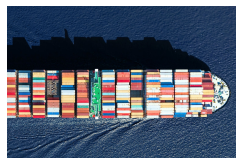

Collaboration on Minerals

Minerals are essential to many clean energy technologies. We will welcome decision-makers from philanthropy, U.S. energy leaders and experts from around the world to discuss the role of the private sector and international critical mineral collaboration.

Livestream: Future Leaders Forum

And a CEM first! The inaugural Creating the Energy Future Forum (CEFF) will host its youth congress on Friday, giving a voice to students, early-stage professionals and young leaders to shape the next decade of clean energy ambition. Global youth must be front and center to realize the clean energy transition. [Watch live](#)

Side Event: Low Carbon Shipping

Friday will spotlight the Clean Energy Marine Hub, a project seeking to accelerate the production and trade of low-carbon fuels for shipping around the world. This public-private platform will deliver action among governments in tandem with the shipping and ports industries. This is one more example of the CEM community showing its leadership not just in words, but action. [More information](#)

Launch of Rise 3

RISE3 – a new activity emerging out of the CEM’s already vibrant nuclear workstream portfolio – will also launch today. This will introduce incredible new work on the social and socioeconomic benefits that nuclear + renewables can bring through country-specific case studies and analysis.

CEM Video Series

Be sure to watch the 5th and last instalment of our powerful video series outlining the steps required to arrive at a clean energy future, produced with support from Bloomberg Philanthropies and ClimateWorks Foundation. [Watch here](#)

CEM15 headed to...

We’re announcing that Brazil will be the host of CEM15!

Tweet, Share, Learn, Get Involved!

CEM Secretariat
135 Rue de la Federation, 75015, Paris
